

## **First User Experiences with nViZn**

Juergen Symanzik & Lacey Jones  
Utah State University

nViZn (<http://www.spss.com/nViZn/>), read "envision", the follow-up to the Graphics Production Library (GPL), is a new commercial tool from SPSS. It is a set of Java class libraries for interactive statistical graphics on the Web and follows closely the graphic design principles described in Leland Wilkinson's book, *The Grammar of Graphics*.

We have had a chance to work with a copy of nViZn since December 2000. In this talk we will describe our experiences, problems, and achievements of our work with nViZn so far.
